**Vienna Instruments**

### Introduction

We have included quite some features we originally introduced with Vienna Instruments PRO to this new face-lifted incarnation of our standard sample player, making it more powerful and economic at the same time; but most of all, it brings the technology "under the hood" to a whole new level.

**Auto Cell Naming** provides both automatic and manual naming of Mdr cells, so you get an instant visual feedback of the available and performed articulations. Dragging a new patch into a cell or a slot will automatically give the cell a more descriptive name.

**Reduced memory usage** per instance, **optimized voice sharing** between all instances and **enhanced CPU performance** have been implemented by our developer team.

**Colored Key-switches** are now also visible on your virtual keyboard, just as the keyrange!

The **built-in reverb** is also great to have!

Our development team has managed to **minimize the start-up time of Vienna Instruments** - you will be delighted! The first time you start the new Vienna Instruments, the software will scan both your licenses and your content. This process will be MUCH quicker than before, and once the scanning process has verified all your licenses, each following start (also the initial starts after re-booting your computer) will be very fast (maximum 10 seconds).

Use Vienna Instruments as a stand-alone software or **VST/MIDI/VST3** plugin, **32-bit** and **64-bit**. Vienna Ensemble, installed alongside Vienna Instruments now, can also be used as a **VST3** plugin.

This manual presents all new elements integrated in Vienna Instruments on a technical level and is designed to be your reference guide in addition to the many [video tutorials](#) you will find online.
